Seatwork #7

1. Which iSCSI host connectivity option offloads both iSCSI and TCP/IP processing from the host CPU?
    A. standard NIC with iSCSI initiator software
    B. TOE NIC
    C. iSCSI HBA
    D. CNA

2. Which type of iSCSI name requires a registered domain name to generate unique iSCSI identifier?
    A. eui
    B. iqn
    C. WWN
    D. MAC

3. Which protocol encapsulates FC frames onto IP packet?
    A. FCoE
    B. iSCSI
    C. FCIP
    D. CIFS

4. Which is a feature of priority-based flow control?
    A. a virtual link can be paused independently
    B. all virtual links are paused together
    C. enables pausing virtual links based on their bandwidth
    D. enables pausing individual physical links based on their priority

5. Which functionality enables allocation of bandwidth to different traffic classes in an FCoE environment?
    A. priority-based flow control
    B. enhanced transmission selection
    C. congestion notification
    D. data center bridging exchange
